Welcome – 04

Profile – 06

Application strategy – 08

Universities – 10-41

The next steps – 43

Hello Gregory

Welcome to your personalised AI report! Inside you'll find your individual recommendations based on the predictions of our AI system.

These predictions are based on a deep understanding of how universities select for their courses. Using massive datasets of previous applicants, the AI can work out exactly what universities are looking for and compare this to your profile, telling you your exact chances of getting in. You'll also find the data-driven steps that you can take to become a better match for the selection process, along with stats on how much these will improve your chances of getting in.

You'll also find a description of the university and teaching style of

each course. From city to campus universities and from traditional to integrated courses you'll be able to compare universities on the factors that matter most to you. Taking these into account, along with your percentage chances of acceptance, will help you make the best possible decision on where to apply to have the best university experience.

We hope you find this a useful guide to applying and wish you all the best for your time at university and beyond.

*This is just a summary of some of the data used in the generation of your chances. Some of the data that you provided to us does not appear here but was still used to make your predictions.

Application strategy

Most applicants will have a really varied range of chances across different universities – it's important to understand that this is normal!

To put this in context remember that most medical schools have at least 10 applicants for each place. Therefore a chance of 10% or more represents an above-average chance of admission at most medical schools. Particularly strong applicants will have around a 40% chance of admission, while anything over 50% represents an excellent applicant with an excellent fit to the medical school's selection criteria.

It's important that you think carefully about how to spend your application slots. In most cases we suggest students split their four choices between two 'aspirational' medical schools where they'd most like to go, and two insurance schools where they've got an excellent chance of getting in.

If you are in the fortunate position of having excellent chances of getting into all your favourite schools then congratulations, although it may also be worth spending a single slot on your highest percentage chance as insurance.

However remember that you should only ever select medical schools where you'd be happy to study if they were your only choice. If you'd rather reapply than study at a particular school then you'll be better off spending an application somewhere else, no matter how great your chances of getting into the first school.

10%

the chance of acceptance of an average applicant at most medical schools.

40%

the chance of acceptance of a good applicant at most medical schools.

Greater than 50%

the chance of acceptance of an excellent applicant at most medical schools.

Please also remember that even the strongest applicants will have a range of schools where they have a low chance of admission: this doesn't necessarily reflect on them as an applicant but simply shows that their particular strengths don't match the selection criteria at those schools.

Universities

Here are all your chances of getting into every medical school. You'll find your chances, why they are what they are and how to improve them.

Aberdeen University

48%

YOUR SCORE

You have a 48 percent chance of successfully gaining entry to this university.

Introduction

One of the UK's ancient universities, Aberdeen was founded in 1495. A sciences heavy university (with over half the students reading either medicine, science or engineering), Aberdeen nonetheless has a strong reputation for arts and humanities, with a particular and longstanding reputation for Theology.

Aberdeen was recently named Scottish University of the year by the Times' Good University Guide and usually comes in the world's top 200. The university guarantees accommodation for all first-year undergraduates and has recently spent £20m on new accommodation. With a population of around 200,000 the city is popular with those students who do not wish to live in a large metropolis.

The course

Aberdeen is a city university that provides an integrated course, meaning you'll have patient contact from a very early stage. It is also case-based, so you'll study different facets of medicine associated with a single case – for example the physiology, pharmacology and biochemistry of the lung around a respiratory case.

Intercalation is offered in various medical sciences or medical humanities as part of the course, which would lead to an additional degree.

WHY THIS IS

Aberdeen has a relatively holistic approach to their admissions process; thus, multiple parts of your academic performance contribute to your overall odds. There is unavoidable uncertainty in your chances, however, because Aberdeen takes great account of your performance at interview.

IMPROVE YOUR CHANCES

As you have already taken your UCAT, the most useful thing to do would be to improve your predicted grades and practice for interview, since they weigh performance in interview so highly. Improving your predicted A to an A* would increase your chances by around 8 percent.

Summary

An ancient university on Scotland's east coast, delivering a modern integrated medicine syllabus. Aberdeen maintains high standards across all of its sciences-strong faculties meaning it is constantly high in international ranking tables.

Birmingham University

< 10%

YOUR SCORE

You have a less than 10 percent chance of successfully gaining entry to this university.

Introduction

Birmingham is home to one of the leading UK universities, which also falls in the global top 100. With an international student body encompassing over 150 countries, it is perfect for anyone seeking a multicultural university experience in the heart of England. It has almost 70 faculties, boasting a wide variety of degrees at various levels, so applicants can be sure to find a course that they enjoy at this institute.

As the first Russell group university to establish a campus in Dubai, Birmingham University can also offer the experience of studying abroad either for the duration of an entire degree or just a year (depending on degree subject).

The course

Birmingham delivers an integrated course with problem-based learning used throughout, at its Edgbaston campus and its associated University Hospitals Birmingham NHS Foundation Trust. Patient contact is limited to 8 days in each of the first two years. From the third year onwards, however, teaching is hospital-based. Problem-based learning is used throughout.

Intercalations are available on a widening range of laboratory or community research-based medical science, policy and management subjects.

WHY THIS IS

Birmingham base their interview decisions heavily on your GCSE grades, so there is a limit to how much you can improve your chances. Although your UCAT is very good, it is your overall performance in your GCSEs that limits your chances.

IMPROVE YOUR CHANCES

The algorithm which they use to evaluate GCSE grades do not work in your favour, and there isn't much you can do about it. You should be focusing on interview preparation as about a quarter of the applicants are eliminated at this stage. It is also important that you don't let your school-work slip and meet any offer you may get.

Summary

A long-established Russell Group university set in the extensive Edgbaston campus. Its medicine course is integrated, with problem-based learning [PBL]. Limited patient contact in the first two years, increasing as clinical training becomes hospital-based later.

Brighton Sussex

<10%

YOUR SCORE

You have a less than 10 percent chance of successfully gaining entry to this university.

Introduction

The Brighton and Sussex Medical School is a partnership between the Universities of Brighton and Sussex. The University of Brighton has three campuses (plus one in Eastbourne). The medical school is situated within the University of Sussex campus at Falmer, in the north-east of Brighton. The entire combined university facilities are within a 20-minute cycle ride of each other and the city centre, and an hour's train journey from London.

Medical school students are members of both students' unions, and can join societies at either. Alumni from these two universities range from Frankie Boyle to A.C. Grayling and Rachel Whiteread.

The course

Brighton and Sussex provides a highly integrated course, with significant patient contact and clinical content forming the basis of its systems-based modules. Full-body dissection forms part of the anatomy study and is very popular.

All students carry out an individual research project in year 4, and intercalation is an option for those who wish to pursue a further research-based degree across a wide range of medical science and related subjects.

WHY THIS IS

Your performance in the BMAT is the main factor in determining whether you get an interview here. Thus, your mock BMAT score is the main reason why your chances aren't higher.

IMPROVE YOUR CHANCES

Your chances would improve by 18 percent if you outperform your BMAT mock score by two across all the sections. The BMAT is the most important part of the admissions process, so you should focus on preparing for it.

Summary

Located in the lively south coast town of Brighton, Brighton Sussex's highly integrated course provides early patient contact and includes full-body dissection, with a research project for all plus intercalation as an option.

Bristol University

67%

YOUR SCORE

You have a 67 percent chance of successfully gaining entry to this university.

Introduction

Bristol is a vibrant, student-friendly city, ideal for applicants from all backgrounds. Having been named the best UK city to live in (2014) and the European Green Capital (2015), it offers an abundance of activities to suit anyone's tastes, which creates the perfect environment for students to enjoy their time at university.

Bristol University attracts some of the brightest students from across the globe, thus placing it among the top 50 universities worldwide. Many employers view a Bristol degree as a mark of excellence, which helps to ensure that graduates can step firmly onto the career ladder.

The course

An integrated course delivered at Bristol's city university facilities and at hospitals in the city and across the region. Although there is early clinical exposure, it is limited in the first two years, before increasing significantly in years 3 to 5.

All students will do at least one research project, but intercalated degrees in either medical science or humanities subjects are available after the third year.

WHY THIS IS

Performance in the UCAT is the main factor Bristol consider in determining offers for places here, once the post-16 qualification threshold is reached. Your A-Level grades exceed that threshold, so your UCAT score becomes the most significant determinant.

IMPROVE YOUR CHANCES

Your priority should be preparing for interview. Since you have already sat the UCAT, there isn't much else you could do to further improve your chances. It is also important that you don't let your school-work slip and meet any offer you may get. Don't become too focussed on your personal statement, as it is unlikely to be used in their decision as to whether to accept you.

Summary

Highly-rated in league tables, Bristol University is set in the heart of this historic and thriving city, a former European Green Capital. The medicine course is integrated, with research project for all and intercalation an option.

Cambridge University

11%

YOUR SCORE

You have an 11 percent chance of successfully gaining entry to this university.

Introduction

As number one in the Guardian's university league tables for seven consecutive years, Cambridge University boasts one of the most highly regarded and sought-after degrees in the world. Cambridge's collegiate system provides both individual and small group academic study alongside university-wide departments, plus an intimate-scale social and sporting life via events hosted by each college.

Cambridge only accepts the most academically talented and curious students to be taught in state-of-the-art facilities by some of the leading international experts in their respective fields. Graduates from Cambridge are highly employable, and go into a wide range of occupations owing to the transferable skills which are learnt in any discipline at Cambridge.

The course

Cambridge teaches a traditional course, with a clear divide between pre-clinical medical science studies and subsequent clinical training. Oxbridge tutorial teaching is adopted within the various colleges, alongside collective academic study, lectures and related teaching for the entire intake.

There is mandatory intercalation in the third year – with a wide range of degree subjects, extending beyond the strict medical sciences.

WHY THIS IS

Cambridge have a complex selection process, and every area of your academic performance has an effect on your odds. While academic performance has the greatest bearing on chances, being a home student and how Cambridge take into account mitigating circumstances have helped your chances.

IMPROVE YOUR CHANCES

A better BMAT score will also boost your chances. If you can target this, then getting those improved grades in your summer exams will be much more useful than a better personal statement. Achieving four predicted A*s as opposed to three would double your chances

Summary

An ancient university held in high regard globally. Cambridge teaches a traditional medicine course via small-group college-based supervisions and university-wide departmental teaching. Intercalation is mandatory, in either medical sciences or other disciplines.

Cardiff University

<10%

YOUR SCORE

You have a less than 10 percent chance of successfully gaining entry to this university.

Introduction

Cardiff University is located in the heart of the thriving capital of Wales, which is also the UK's most affordable city according to the NatWest student living index. Cardiff is a compact city so students can travel easily and quickly between campus and accommodation.

The city also has a very young demographic which is why it's known for its nightlife. The students' union here also offers more than 60 different sports clubs and various other societies with which to get involved. Academically, students can create their own programme thanks to their flexible module structure meaning modules can be chosen from more than one department.

The course

Cardiff delivers a spiral curriculum and case-based learning, with the same topics re visited in greater depth throughout the course. Patient contact increases from a day per week initially to full integration in clinical teams by year 5. Teaching is split between Cardiff's University Hospital and the central Cathays Campus, with placements at various regional hospitals and practices.

Intercalation in medical-related sciences is a limited option after year 3.

WHY THIS IS

Cardiff base their selection process principally on your qualifications achieved at school. The primary reason your chances aren't better is mainly due to their method of evaluating GCSE grades working against you.

IMPROVE YOUR CHANCES

The most important thing you can do boost your chances is preparing for interview. Also, make sure you can meet any offers you might get.

Summary

Cardiff's Cathays campus is in the heart of Wales' vibrant capital, with the University Hospital a mile and a half to the north. The integrated course has a spiral curriculum, with gradually increasing clinical exposure throughout.

Dundee University

41%

YOUR SCORE

You have a 41 percent chance of successfully gaining entry to this university.

Introduction

Overlooking the Tay estuary in Scotland, the University of Dundee was originally a part of the University of St. Andrews. Since it became independent in 1967, the university has certainly made a name for itself, ranking 3rd in Scotland and 24th in the UK in the 2020 Times and Sunday Times Good University Guide.

The city itself, while not one of the most famous in the UK, can punch above its weight, with plenty of nightlife, food, green spaces, and cultural attractions including the V&A Dundee Museum of Design. It's no wonder GQ Magazine described Dundee as "Britain's coolest little city", which ensures a great student experience.

The course

A spiral curriculum is used to deliver a fairly traditional course structure at the medical school within the Ninewells Hospital complex. Both problem-based learning and clinical simulation training are used extensively. Full-body dissection is also a feature not available at all medical schools.

Intercalation is offered, with a wide range of laboratory- and study-based options in areas including medical science, forensic medicine, genetics, health and education.

WHY THIS IS

Dundee's selection process is such that multiple factors in your profile and academic performance factor into your chances. You have a high chance of getting an interview largely because of your performance at post-16 examinations and the UCAT is good.

IMPROVE YOUR CHANCES

Since you have already sat the UCAT, you should make sure you are well-prepared for the interview, as around half of the candidates are eliminated at this stage. Such preparation would also help to increase your chances at other universities.

Summary

Becoming independent only in 1967, Dundee now frequently ranks highly in its own right in university guides. The traditionally-structured medical course mixes PBL, clinical simulation and full-body dissection within a spiral curriculum.

University of East Anglia

57%

YOUR SCORE

You have a 57 percent chance of successfully gaining entry to this university.

Introduction

Ranked 21st by the Complete University Guide UK and top 200 in the Times Higher World University Rankings, the University of East Anglia offers a world class education in the heart of the British countryside. Delivering over 300 courses, its teaching is deemed world class, with 82% of research marked 'world-leading' or 'internationally excellent'.

All this is delivered on a single, multi-million pound 320-acre campus that provides excellent sporting facilities, a grade II listed centre for visual arts, and distinctive ziggurat-shaped accommodation blocks alongside academic departments that means internal commuting is never a hassle.

The course

This integrated course is taught at the medical school on the UEA campus and at the immediately adjacent University Hospital. Considerable use is made of problem-based and systems-based learning, with early clinical exposure and frequent patient contact. Dissection is also used within the study of anatomy.

A wide range of intercalations are available with examples ranging from medical science to clinical education and health economics.

WHY THIS IS

Based on the similarity of your profile to those of previous successful candidates, the factor that influences your chances most is your UCAT score. Beyond that, your interview performance is a further major factor in the calculation of your chances of success.

IMPROVE YOUR CHANCES

As you have already taken the UCAT, the main thing you should focus on is preparing for interview. In addition, you could also work on fine-tuning your personal statement.

Summary

The multi-million pound, 320-acre campus development provides the University of East Anglia with extensive modern facilities.

The similarly modern integrated medicine course is delivered via PBL and system-based learning, with early and frequent patient contact.

Edinburgh University

46%

YOUR SCORE

You have a 46 percent chance of successfully gaining entry to this university.

Introduction

Considered to be one of the most desirable places to live in the world, Edinburgh blends the liveliness of being a capital city with the intimacy of being small compared to many others.

Located in the centre of this cultural hub is Edinburgh university itself which has been at the forefront of knowledge since its founding in 1583. With over 280 clubs and societies to choose from, a student at Edinburgh would benefit not only from the many academic opportunities available here, but also from the exciting student life created by the students' union.

The course

A traditional course with mandatory intercalation and a strong focus on research. The first two years are taught in the central university area. Following intercalation, clinical teaching is centred on the School of Medicine at the Royal Infirmary and at other hospitals and practices in Edinburgh and beyond.

Research-based intercalation takes place in year 3, across a wide range of medical sciences and related subjects.

WHY THIS IS

While Edinburgh have recently started interviewing their candidates, they still care a great deal about your grades at GCSE, A-levels and the UCAT. Your chances are good because you rank highly for academic performance.

IMPROVE YOUR CHANCES

Your odds would go up if you were to improve your A-Level grades beyond your current projection, but not by more than 5 percent. As you have already sat UCAT, make sure you do plenty of interview preparation, but don't worry too much about your personal statement. Such preparation would also help to increase your chances at other universities.

Summary

Scotland's energetic capital, home to the International Festival and the Fringe, holds the ancient university close to its centre. The medicine course is traditional, has a strong research focus and contains a mandatory intercalation.

Exeter University

40%

YOUR SCORE

You have a 40 percent chance of successfully gaining entry to this university.

Introduction

Although primarily centred on Exeter itself, Exeter University is composed of three campuses split into six colleges across Devon and Cornwall. Each campus blends modern architecture and brand-new technology within historic cities, thus creating the perfect balance of urban and rural life. Easy access to nearby coast and beaches provides a popular escape for students, especially during exam season.

Having recently risen by four places in the Guardian league table, students at Exeter are privileged to be taught by innovators and leaders in their respective fields, whilst also walking in the footsteps of some respectable alumni such as J.K. Rowling.

The course

Exeter provides an integrated course with a strong emphasis on early and continuing clinical exposure as well as problem-based learning throughout. The first year is taught mainly at the St. Luke's campus, with subsequent years increasingly centred on Trust Hospitals and medical practices across Devon, Cornwall and the South-West.

Intercalation is an option after year 4, across a range of medical sciences plus medical humanities.

WHY THIS IS

Exeter's decision-making process places a strong emphasis on post-16 qualifications grades, and these have a significant influence on your chances. They tend to only use UCAT scores in the case of borderline decisions, so your UCAT performance doesn't have much of an effect on your chances.

IMPROVE YOUR CHANCES

Fewer than half of the interview candidates at Exeter are given an offer, meaning that good preparation is crucial. Such preparation would also help to increase your chances at other universities.

Summary

Exeter's location in a lively city close to the beaches of south-western England make it a perennial favourite with students. Its integrated medical course with continual clinical contact, PBL and optional intercalation is similarly popular.

Glasgow University

35%

YOUR SCORE

You have a 35 percent chance of successfully gaining entry to this university.

Introduction

Having attained recent sporting prominence by hosting the 2014 Commonwealth Games and the 2018 European Championships, Glasgow University is inspiring many young people to be more active, with its world-class sporting facilities available to all students.

Glasgow is also one of the UK's most beautiful cities, and one of the best-connected, boasting easy access to three international airports, and with its own subway network enabling students to travel around the city easily. Being a campus within a city allows students to separate their academic and social lives, easily integrating their academic studies with extracurricular and social activities that the university and city offer.

The course

An integrated course with clinical exposure from first year onwards. Problem-based learning underpins a systems-based approach within a spiral curriculum linking content together across the entire course. Teaching is at the Wolfson Medical School in the main university and the Queen's University Hospital, with placements in year 3 and beyond at hospitals and practices across the west of Scotland.

Intercalations are available across a range of 20 science options.

WHY THIS IS

Glasgow screens all candidates by academic performance, then evaluates personal statement and finally ranks by UCAT score to determine their interview shortlist. Therefore, your performance in the UCAT is proving the dominant factor in determining your odds.

IMPROVE YOUR CHANCES

As you have already sat your UCAT, the most important thing you can do now is to prepare for interview. Beyond this, you may want to try to finetune your personal statement, which will also support your chances at other universities to which you might be applying.

Summary

A beautiful city boasting sports facilities that have hosted recent international events, Glasgow provides multitudinous attractions for students. Its spiral curriculum, integrated course is taught at the city campus and University Hospital, with intercalation an option.

Hull-York University

66%

YOUR SCORE

You have a 66 percent chance of successfully gaining entry to this university.

Introduction

The Hull York Medical School is a partnership between the Universities of Hull and York.

The newest member of the prestigious Russell Group, the University of York is located in one of Britain's most historic cities, often voted one of the best in which to live. The 2020 Sunday Times Good University Guide ranked York as the best of the Russell Group in teaching, and it was also highest in 'overall satisfaction' in the 2019 National Student Survey.

The University of Hull is in one of the most affordable cities in the UK and was ranked as the most affordable in the Natwest 2018 Student Living Index. It is also conveniently structured around one campus.

The course

The first two years of this integrated course is taught at both the Hull and York university campuses. Problem-based learning is utilised, and clinical skills sessions are supplemented by clinical placements. Clinical studies in years 3 to 5 take place at hospitals and practices across the region.

A 'Scholarship and Special Interest Programme' allows deeper study of areas of particular interest, including dissection, and intercalations in medical sciences are possible.

WHY THIS IS

Hull York selects principally by considering your GCSE grades and UCAT score. They also weigh contextual information heavily and our AI has taken this into consideration when calculating your odds.

IMPROVE YOUR CHANCES

As you have sat the UCAT already, you should be focusing on interview preparation, but be aware that it is only a limited part of their selection process. Your time may probably be better spent improving your chances at other universities.

Summary

Hull University, acclaimed for its affordability and student facilities, and the Russell Group York University, set in one of the UK's most historic cities, combine to deliver this integrated medicine course. Dissection and intercalation are both options.

Imperial College

23%

YOUR SCORE

You have a 23 percent chance of successfully gaining entry to this university.

Introduction

Imperial University London is the UK's only university to focus solely on business, engineering, science and medicine. With a ranking comfortably in the global top ten, degrees from this university are highly valued by employers across the globe. Aided by their unique "professional development" programme and surrounded by over 100 of Europe's 500 largest companies, students at Imperial are able to benefit from some of the best job market opportunities after graduating.

The university offers generous bursaries of up to £5,000 per annum to students who demonstrate outstanding talent, but who have low household income, thus providing opportunities to those from less affluent backgrounds.

The course

Imperial College School of Medicine places a strong emphasis on science and research in a traditional course that utilises a spiral curriculum. Problem-based learning and case-based teaching provide a clinical focus that supplements the science base. Clinical studies are conducted at hospitals and practices across north and west London.

A medical or science-based intercalation that includes a research project, is built into the course structure.

WHY THIS IS

Imperial's interview screening process has a heavy focus on the BMAT, and this was the dominant factor in our calculations of your chances. Conversely, your performance in non-BMAT exams and your personal statement will have little effect.

IMPROVE YOUR CHANCES

Assuming you achieve your projected A-level grades, the BMAT screening is the most important stage of the selection process, so prepare for it above all else. Increasing your score in BMAT by 1 in each section would reduce your chances of failing to get an interview by around 50 percent.

Summary

As well as the attractions of life in one of the world's great capital cities, Imperial College offers bursaries to outstanding but underprivileged students. The science-based course is traditional but with integrated intercalation.

King's College London

67%

YOUR SCORE

You have a 67 percent chance of successfully gaining entry to this university.

Introduction

Located in the centre of one of the UK's most vibrant cities, King's College London has four campuses situated around the Thames. In this prime location, students will never be short of activities to occupy any free time. The university offers accommodation to all their first-year students, as well as a support team to help students settle in without the stress of finding accommodation or navigating around London.

King's international environment brings many students under one roof from various corners of the world thus developing the global network which increases their employability along with world class academics who facilitate their learning and skills.

The course

King's delivers an integrated curriculum including a mandatory intercalation, for which sciences and humanities are options. Dissection is offered and continues to prove popular with students. There is limited patient contact in the early years, but a clinical focus is provided via case-based teaching. Clinical work is undertaken at Guy's, King's College and St Thomas' as well as other hospitals and practices across London and the South-East.

WHY THIS IS

KCL has a relatively holistic selection procedure, with a number of different parts of your profile contributing to your chances. Your performance in the UCAT is helping your chances significantly.

IMPROVE YOUR CHANCES

Since you have already sat the UCAT, you should prepare carefully for your interview as it has a high inherent degree of uncertainty. You could also work on improving your odds at other medical schools.

Summary

King's College has facilities grouped around the River Thames in central London, proving attractive to students from around the globe. The integrated medicine course has limited early patient contact, but offers dissection and a mandatory intercalation.

Keele University

< 10%

YOUR SCORE

You have a less than 10 percent chance of successfully gaining entry to this university.

Introduction

Keele University is on a single campus set in hundreds of acres of beautiful woodland and parks. Many of the facilities, including the medical school, are ultra-modern. Students live in one of its five halls of residence and are guaranteed accommodation if Keele is their first choice.

The intellectual ethos of the university is one of interdisciplinary and multi-disciplinary scholarship. Keele has a particularly strong focus on helping international students settle in and many programmes are dedicated to this purpose. This has, in part, resulted in the Times ranking Keele in the top 5 for student communities.

The course

Keele offers an integrated course that utilises frequent problem-based learning within a spiral curriculum. Studies are split between the main university campus and the nearby University Hospital, with clinical placements also at several other associate hospitals and at practices across the region.

Intercalation for a taught or research-based B.Sc. is an option after year 2, with a Master's degree an alternative after year 4.

WHY THIS IS

Keele has an unusually strong emphasis on their Roles and Responsibilities form, and this has been the dominant factor in determining your chances. They have a hard threshold for your UCAT score, and your performance should be strong enough to pass their filter.

IMPROVE YOUR CHANCES

Since there is such emphasis on the Roles and Responsibilities form, you should maximise your work experience and volunteering and consider how to emphasise it within your submission. Interview performance is also very important, with about half of the candidates eliminated at that stage. Unfortunately, your 20 hours of volunteering is significantly below average and harming your chances.

Summary

A woodland campus is home to the intensely modern Keele University, which has a strong community ethos and excellent support for international students. The integrated medicine course is delivered between the campus medical school and nearby University Hospital.

Lancaster University

27%

YOUR SCORE

You have a 27 percent chance of successfully gaining entry to this university.

Introduction

Having attained seventh place in the Guardian UK University Guide in 2020, Lancaster University is currently ranked within the top ten of all three national league tables. A plethora of further statistics show how Lancaster has recently entrenched itself in the top tier of UK universities: International University of the Year by The Times and The Sunday Times Good University Guide 2020 and 3rd in the UK for graduate-level employment, the list goes on.

Of course, facts and figures aren't everything; the collegiate system that enables students to choose a college with its own identity and community provides a starting point for socialising and becoming involved in university life.

The course

This integrated course is delivered encompassing problem-based learning throughout, provides early patient contact, and places significant emphasis on GP and community placements and practice. Teaching is predominantly at the main campus medical school during year 1, and via clinical placements at the Royal Lancaster Infirmary and a number of other hospitals and primary care practices in years 2 to 5. Intercalation is an option after year 4.

WHY THIS IS

Based on your profile, your performance in the BMAT will almost certainly determine whether you get an interview at Lancaster. While there is inherent uncertainty in your interview performance, a strong showing at Lancaster's MMIs could be crucial.

IMPROVE YOUR CHANCES

As you haven't sat the BMAT yet, your priority should be to focus on preparing for it above anything else. Increasing your BMAT score by 2 in one section would increase your chances by 7 percent on average.

Summary

Lancaster has a relatively small student population and sits high in all major league tables. The main campus medical school is the focus for much of the study and the course places emphasis on GP and community medicine.

Leeds University

<10%

YOUR SCORE

You have a less than 10 percent chance of successfully gaining entry to this university.

Introduction

Leeds University is based on a 98-acre campus and is just one mile away from Leeds city-centre. It is the fifth-largest in the UK with just over 35,000 students, yet has a reputation for having a strong community. It has an impressive track record in graduate employability and counts six Nobel Laureates among its alumni.

The university has committed £520 million to expansion and refurbishment to revitalize its campus and upgrade its academic, student accommodation and ancillary facilities. It already boasts many sports and entertainment facilities including a fitness centre called “The Edge” and a contemporary performance space called “stage@leeds”.

The course

Leeds University Medical School is adjacent to the Leeds General Infirmary and also close to other university facilities. A systems-based and integrated course is delivered that offers early patient contact, full body dissection and a range of intercalation options after years 2, 3 or 4.

Clinical training placements at the Infirmary and other acute and general hospitals in the area, plus GP and community practices increase in later years.

WHY THIS IS

The dominant factors in determining your chances at Leeds are your grades at GCSE and your BMAT score. There is some uncertainty because we don't know how you'll perform during the MMIs, but around 40% of those who are invited to interview are given an offer.

IMPROVE YOUR CHANCES

Besides preparing for interview, you should do lots of practice for the BMAT as a higher score would provide the biggest increase to your chances. Getting a fourth quintile BMAT score would more than triple your chances. This should be achievable with just a half a point increase in each section compared to your mock.

Summary

A campus-based medical school adjacent to the main teaching hospital and close to the centre of this major city. Leeds' systems-based integrated course includes early patient contact and full-body dissection plus intercalation options at several stages.

Leicester University

63%

YOUR SCORE

You have a 63 percent chance of successfully gaining entry to this university.

Introduction

Leicester University prides itself on being one of the most socially inclusive in the UK. It is also one of the most affordable places to live in the UK as a student. The university guarantees accommodation to first-year students if they firmly accept an offer and apply by the September 1st deadline.

The campus is compact, with all teaching buildings within a few minutes' walk, and represents a century of architectural styles. The university is in the heart of the city of Leicester which, with a population of 300,000, has plenty of entertainment to offer a student.

The course

Leicester's patient-focussed integrated course utilises systems-based teaching, with particular emphasis during the first two years. The Medical School has modern simulation, skills training and full-body dissection facilities. More extensive clinical training placements at several acute and general hospitals and practices in the region take place mainly in years 3 to 5.

WHY THIS IS

Your performance at GCSE and your UCAT score are the dominant factors in determining your chances of getting into Leicester. Based on your profile, your academic performance is better than average compared to the past applicants, and this has increased your odds.

IMPROVE YOUR CHANCES

As you have already taken the UCAT, the main thing you could do to improve your chances is to prepare for interview. While working on your personal statement would help, the foundation for your good chances here are already in place and cannot be easily improved further.

Summary

Leicester is a compact campus within a small city offering much in the way of facilities and entertainment. The medicine course is patient-focussed and offers full-body dissection alongside modern simulation and skills training facilities.

Liverpool University

52%

YOUR SCORE

You have a 52 percent chance of successfully gaining entry to this university.

Introduction

The second oldest of the current “red-brick” universities and ranked among the top 200 hundred universities globally, the University of Liverpool embodies the pioneering nature of its city. Students will always be kept busy both academically and socially, with its campus only a few minutes’ walk from the centre of a city rich with culture, history, nightlife and affordable housing.

Prospects are also decent after graduating, with 96.9% of the UK undergraduates in employment or further study six months after graduation, according to the Destination of Leavers from Higher Education survey of 2016/2017.

The course

Liverpool delivers its course via integrated systems-based learning within a spiral curriculum. Early years are focussed on basic and clinical sciences, and clinical skills, predominantly at the university campus. Years 3 to 5 increase clinical exposure in surgery and medicine at a number of hospitals and GP and community practices in Liverpool and the North-West.

Intercalation is possible after year 3, with a range of medicine-related science among the options.

WHY THIS IS

Your UCAT score is proving to be the dominant factor in calculating your chances at Liverpool. Since you meet sufficient criteria that you should get an interview, how you do on the day will then be crucial.

IMPROVE YOUR CHANCES

As you have already sat the UCAT, your priority should be preparing for interview and, if possible, aim to achieve better than predicted A-level grades.

Summary

Liverpool is a city renowned for its history and vibrant, cosmopolitan atmosphere, and the university is one of the oldest “red-bricks”. Its medical school delivers an integrated, spiral curriculum, with science-based intercalations an option.

Manchester University

63%

YOUR SCORE

You have a 63 percent chance of successfully gaining entry to this university.

Introduction

An historic 19th century “red-brick” university and part of the prestigious Russell Group, Manchester University is the second largest in the UK. The rankings it has attained perhaps explains its popularity: 27th in the QS 2020 World University Rankings, and 15th in the 2020 Complete University Guide UK. It has the funding to match too, with one of the largest endowments and incomes of any UK university.

In terms of student life, Manchester is vibrant and dynamic, with its campus located near a city centre that rivals London in liveliness and diversity, while its alumni, ranging from Benedict Cumberbatch to Brian Cox, bear testament to the university’s formidable reputation.

The course

This integrated course is underpinned by case-based learning throughout. Years 1 and 2 are based at the main campus although some early clinical exposure is provided, and whole-body dissection is also studied. Clinical training during years 3 to 5 is undertaken at a “base” hospital, as well as other hospitals and care practices in the region.

A range of intercalation options are available after years 2, 3 or 4.

WHY THIS IS

The academic factor which influences your chances the most is your performance in the UCAT. Your chances are also based on how well applicants with similar profiles to yours have performed at interview at Manchester.

IMPROVE YOUR CHANCES

As you have already taken the UCAT, the main thing you should focus on is preparing for interview. In addition, you could also work on fine-tuning your personal statement.

Summary

Manchester University is the second largest in the country, and a Russell Group member, situated in a well-known, modern and exciting city. Its medical school is on the main city campus and provides an integrated course.

Newcastle University

59%

YOUR SCORE

You have a 59 percent chance of successfully gaining entry to this university.

Introduction

A Russell Group member, Newcastle University is located on the north-eastern coast of England. It is a medium-sized establishment hosting around 20,000 undergraduate students, of which a tenth come from overseas. Unlike many other UK universities, it offers a special combined honours degree that allows students to choose modules from across the arts, humanities and social sciences faculties. This wider insight and greater flexibility is similar to that of many American universities, but within a 3-year course.

Students benefit from being at the heart of the vibrant culture of the city, with the main campus located only about a mile from the city centre, including the renowned Sage music and arts centre.

The course

Newcastle provides an integrated course founded on case-based learning. During the first 2 years the essentials of medical practice are developed, incorporating early clinical and community experience. Clinical training in years 3 to 5 take place within one of four “base units” that each provide the full range of placements in each of the specialist areas studied.

Intercalation for a B.Sc. after year 2, or a Master's after year 4 are alternative options.

WHY THIS IS

Your chances are dominated by your performance in the UCAT since Newcastle use it as the most important factor in interview selection. The other major factor in calculating your odds is how well we estimate you will perform at interview

IMPROVE YOUR CHANCES

As you have already taken the UCAT, the main thing you should focus on is preparing for interview, where around a third of the candidates are eliminated. In addition, you could also work on fine-tuning your personal statement.

Summary

A Russell Group member, Newcastle University is located on a campus close to the centre of this well-known northern English city. The integrated medicine course utilises case-based learning, with early incorporation of clinical and community experience.

Nottingham University

12%

YOUR SCORE

You have a 12 percent chance of successfully gaining entry to this university.

Introduction

In the top 25 across the UK's major league tables, the University of Nottingham is a member of both the Russell Group and the collaborative, research-intensive Universitas 21 group of leading universities from eighteen different countries. While Nottingham might not be as large as London or Manchester, its status as the 6th best on the QS Best Student Cities ranking 2019 shows it can certainly hold its own.

Those wanting to study further afield are also well catered for, with Nottingham being unique in having international campuses in both Malaysia and China – showcasing the university's global connections.

The course

Nottingham delivers an interesting course that awards an extra BMedSci degree without the need for an intercalation (although you can still intercalate a PhD or Master's if you wish). The course uses case-based learning, includes early clinical placement in primary and secondary care, and also offers full body dissection.

The clinical phase occupies the end of year 3 plus years 4 and 5, with placements at hospitals and practices across Nottinghamshire and Derbyshire.

WHY THIS IS

A stronger performance at GCSE would have improved your chances of interview further. We have also taken into consideration your performance in the UCAT and how well candidates with profiles similar to yours perform at interview.

IMPROVE YOUR CHANCES

As you have already taken the UCAT, the main thing you should focus on is preparing for interview. In addition, you could make sure your personal statement matches their requirements.

Summary

A member of both the Russell Group and Universitas 21, Nottingham also has campuses in Malaysia and China. It has an interesting course incorporating a medical science degree as well as the GMC-accredited BMBS degree, plus intercalation options.

Oxford University

<10%

YOUR SCORE

You have a less than 10 percent chance of successfully gaining entry to this university.

Introduction

Having retained its first place for four years in a row, few words are needed to describe the prestige and excellence that comes with an Oxford degree. As the UK's oldest university and boasting impressive lists of alumni and academics, the university is a magnet for its world class teaching and research. Its 33 undergraduate colleges deliver the world-renowned tutorial study/teaching that complements its university-wide academic departments.

With 43% of the student body coming from over 150 countries and territories, Oxford offers both a cosmopolitan and unique student experience. Its colleges also provide the close-knit student community that is the hub of social and sporting life.

The course

A traditional course that is delivered via college-based tutorial teaching as well as full cohort lectures and small group laboratory work through the first three years, with a mandatory research-based intercalation in medical science.

Although remaining attached to a college, years 4 to 6 provide clinical training based mainly at the John Radcliffe Hospital, as well as other hospitals in the area to cover all required specialist rotations.

WHY THIS IS

While Oxford requires a consistently strong profile, it places significant emphasis on GCSE performance and BMAT score, and has high thresholds in both categories. Your BMAT mock score is principally what is currently diminishing your chances here.

IMPROVE YOUR CHANCES

The biggest thing you can do to improve your chances is to try to achieve a higher score in the BMAT. If you do consider an application to Oxford, then preparation for its particular interview process will also be most important.

Summary

One of the world's oldest and most renowned universities. Oxford's colleges provide both an intimate social environment and the tutorials that are the rigorous academic strength supporting the university-wide departmental delivery of its traditional medicine course.

Plymouth University

55%

YOUR SCORE

You have a 55 percent chance of successfully gaining entry to this university.

Introduction

One of the larger universities in the UK, Plymouth is the only one of the UK's "new" universities to have a medical school. The university has recently invested over £155m in facilities, which are predominantly at its city centre campus, although it also has medicine and dentistry facilities at Derriford Hospital. With its coastal location and naval history, Plymouth has a particularly strong reputation in marine and maritime research.

All undergraduates have accommodation for their first year, in central locations close to the city's many attractions including theatre, marina, surfing, boating and nightlife. Plymouth is one of the cheapest places to study in the UK.

The course

Plymouth's integrated course provides patient interaction from the first few weeks, with supplemental problem-based and clinical case-based learning. Within this context, basic science and core medical knowledge are taught in the first two years. Clinical placements in hospitals and GP practices in Plymouth and the region increase during years 3 to 5, culminating in full involvement in a hospital medical team. A wide range of intercalation options are available.

WHY THIS IS

The factor which has the most influence on your chances of receiving an offer from Plymouth is your performance in the UCAT. The other major factor in the calculation of your odds is how well candidates with profiles similar to yours have performed at interview.

IMPROVE YOUR CHANCES

As you have already taken the UCAT, the main thing you should focus on is preparing for interview. In addition, you could also work on fine-tuning your personal statement.

Summary

Plymouth is a famed naval and maritime city that offers both city and coastal attractions to its students. In its integrated course, the Peninsula Medical School teaches at the main Plymouth campus and at hospitals across the south-west.

Queen Mary's University

57%

YOUR SCORE

You have a 57 percent chance of successfully gaining entry to this university.

Introduction

Queen Mary's is both a college of the University of London and a member of the prestigious Russell Group. It has a strong international reputation with around half of its students coming from overseas. Medicine is one of its renowned and longstanding strengths, and it delivers its medicine-related courses in partnership with Barts and the London School of Medicine and Dentistry.

It is well situated across four campuses in the East End of London, with all the benefits of being in the capital. Queen Mary's also has various programmes allowing students to study in other countries such as China, Greece and Malta.

The course

Also called Bart's and The London, this is one of the oldest medical schools, now offering a modern course with problem-based learning, much of it based on early patient contact and clinical cases. Years 3 and 4 build on basic science and medical knowledge with clinical placements, while year 5 combines further placements with medical school teaching.

Intercalation for both Bachelor and Master's degrees is an option at various stages.

WHY THIS IS

Queen Mary's mainly considers your post-16 qualifications and performance in the UCAT when deciding whether to invite you for interview. You have very good predicted A-level grades, which are particularly boosting your chances.

IMPROVE YOUR CHANCES

You should be focusing on interview preparation as about half of the applicants are eliminated at this stage. Since you have already sat the UCAT, making sure that you achieve your predicted grades in your exams is vital.

Summary

A venerable medical school teaching a modern, integrated course using clinical-case PBL and with early patient contact. Queen Mary's is a Russell Group member with around 50% of its students attracted by its academic excellence and London location.

Queen's University Belfast

55%

YOUR SCORE

You have a 55 percent chance of successfully gaining entry to this university.

Introduction

The UK's ninth-oldest university, Queen's University Belfast is ranked in many areas as the best university in Northern Ireland, and high in the UK-wide league tables. The university is a member of the Russell Group, has a strong research reputation, and has produced alumni including Seamus Heaney and David Trimble.

It is well situated in the student-friendly city of Belfast, and the rest of Northern Ireland can easily be reached. It also has an impressive employment record for its graduates, with consistently well over 90% of its graduates are in employment or further study six months after graduation.

The course

Queen's delivers an integrated course that includes early patient contact and clinical placements, and anatomy teaching includes whole body dissection. Basic science and medicine is taught from a systems perspective, developing medical knowledge before a move into broader clinical training, which increases during years 3 to 5 and takes place in hospitals and primary care across Northern Ireland.

Intercalation options at Bachelor's and Master's degree level are available.

WHY THIS IS

Most of Queen's Belfast's selection is based on a combination of your GCSE grades and UCAT score. Given your excellent performance across both GCSEs and UCAT, you have a strong chance of a place here.

IMPROVE YOUR CHANCES

Since you have already sat the UCAT, you should focus on preparing for interview, where around 40% of candidates are usually eliminated.

Summary

Northern Ireland's only medical school is part of this ancient university in the revitalised and vibrant city of Belfast. Although an integrated course it has a strong science foundation and full-body dissection, introducing clinical training later.

St Andrew's University

75%

YOUR SCORE

You have a 75 percent chance of successfully gaining entry to this university.

Introduction

As the third oldest university in the English-speaking world and the oldest of the Scottish universities, St. Andrews certainly lives up to its motto: "Ever to Excel". Ranked second by the 2020 Guardian UK University Guide, and the top Scottish university by the 2020 Complete University Guide, St. Andrews regularly tops league tables. Whilst that might be partially down to the idyllic settings of its eponymous town, the university is far from disconnected with the outside world.

St. Andrews is a favourite of American students, who make up around 1 in 6 of the student population in 2017, not to mention students and staff representing another 140 nationalities.

The course

St Andrew's offers only the first three years of medical training. After graduating with your B.Sc. honours degree, you transfer to Aberdeen, Dundee, Edinburgh, Glasgow, Queen Mary's or Manchester to complete your training. The course provides the scientific and medical foundation for a medical career, also developing the clinical and communication skills required during subsequent clinical training. A research project is undertaken during the third year.

WHY THIS IS

St Andrew's has a two-stage selection process. The candidates are first screened by their work experience and academic performance. Those who pass are then ranked by their UCAT score to determine who will be interviewed. Your strong UCAT score gives you an excellent chance of success here.

IMPROVE YOUR CHANCES

As you have already sat your UCAT, you should focus on preparing for interview. In addition, make sure you can meet any offer you might be given.

Summary

One of the world's oldest universities, much favoured by American students, situated in a beautiful Scottish coastal city. The course provides the first three years of science-based teaching only, with subsequent transfer to other universities for clinical training.

St George's University

48%

YOUR SCORE

You have a 48 percent chance of successfully gaining entry to this university.

Introduction

St George's is unique as a College of the University of London in focussing only on medicine. It is attached to St George's Hospital, which is one of London's largest and busiest hospitals. Furthermore, it boasts Advanced Patient Simulators which provide further training opportunities to students. While a specialist medical school, it offers a diverse range of undergraduate courses such as clinical pharmacology, diagnostic radiography and occupational therapy (all B.Sc.).

It is excellently situated in South-West London, with all of the benefits that come from being in the UK's largest city. It also has a strong reputation for research across medical disciplines.

The course

The course at St George's is traditional in that basic medical science is taught during the first two years, followed by a transition into clinical training in year 3 and increasing clinical placements across various specialisms in years 4 and 5. Teaching is based on clinical cases and problem-based learning is used throughout.

An intercalated B.Sc. degree is an option after year 3.

WHY THIS IS

Your chances are dominated by your UCAT performance. St George's takes mitigating factors into account, and favours home students, all of which benefits you.

IMPROVE YOUR CHANCES

Your UCAT performance is very strong, which means you should prioritise interview preparation at this stage. While St George's don't consider it very important, a good personal statement would improve your chances, so edit it carefully.

Summary

Uniquely-focussed on medicine, St George's is situated within one of the major hospitals in the UK's capital city. It's traditional course focusses on medical science in the early years with clinical later, and with intercalation an option.

Sheffield University

66%

YOUR SCORE

You have a 66 percent chance of successfully gaining entry to this university.

Introduction

Twelfth in this year's QS UK University Rankings, the University of Sheffield has solidly established itself in the top tier of UK universities. delivering over 100 courses with over a quarter of them offering study abroad opportunities, Sheffield offers a range that doesn't sacrifice quality for quantity. That quality led to it being rated second in the Russell Group for student satisfaction in the 2019 National Student Survey.

First-year students are guaranteed accommodation and Sheffield has one of the lowest student living costs in the UK. Alumni include Nobel Prize winning Chemist and Molecular Biologist Sir Richard Roberts and comedian Eddie Izzard.

The course

Systems-based teaching, with clinical case examples and dissection, is used during the early years of Sheffield's integrated course, with significant clinical exposure in hospitals and GP practices from the outset. A research project is completed in year 2, and further clinical science teaching transitions into increasing clinical training that predominates in years 3 to 5.

Both research-based and surgery intercalations are available.

WHY THIS IS

Sheffield base their interview selection almost exclusively on your UCAT performance. We have also taken into consideration how well you will potentially do at interview in calculating your odds.

IMPROVE YOUR CHANCES

As you have already taken the UCAT, the main thing you should focus on is preparing for interview. In addition, you could also work on fine-tuning your personal statement.

Summary

Highly-ranked in the Russell Group and nationally, Sheffield University is close to the city centre, with the medical school at the nearby Royal Hallamshire Hospital. Clinical exposure from the start and dissection are features of its integrated course.

Southampton University

62%

YOUR SCORE

You have a 62 percent chance of successfully gaining entry to this university.

Introduction

The University of Southampton is one of the founding members of the Russell Group and has a strong research reputation. It delivers its courses across two main and three other campuses in Southampton, plus an international campus in Malaysia. It is consistently ranked in the top 30 universities in the UK and the top 100 in the world. All students are guaranteed accommodation for two years in Halls of Residence.

The city, on the south coast, is student-friendly and only 60 miles from London. The university has an especially strong reputation for engineering and puts strong emphasis on collaboration with industry in the syllabus.

The course

Southampton's integrated course is delivered at its main university campus and the nearby University Hospital. Problem-based learning is a feature of the first two years during which there is also significant clinical exposure and patient contact. A 16-week research project is undertaken in year 3, which also provides the transition into clinical training that takes place predominantly in years 4 and 5.

Intercalation is an option between years 3 and 4.

WHY THIS IS

The factor which has the greatest influence on your chances at Southampton is your performance in the UCAT. The other major consideration in the calculations is how well we think you might do at interview, based on how similar candidates have performed at Southampton's interviews.

IMPROVE YOUR CHANCES

As you have already taken the UCAT, the main thing you should focus on is preparing for interview. In addition, you could also work on fine-tuning your personal statement.

Summary

A founding Russell Group member, Southampton is based on campuses close to the large Southampton Common. Its integrated course features PBL underpinning science teaching and a research project, with intercalations a further option.

University College London

<10%

YOUR SCORE

You have a less than 10 percent chance of successfully gaining entry to this university.

Introduction

Among the most respected of the myriad institutions that constitute the University of London, University College London has always comfortably held top spots in both national and international rankings – currently from eighth to eighteenth place in four major league tables.

Its central London location has shaped the university's structure, from the vibrancy of student life, with one of the UK's oldest students' unions, to its many partnerships with other institutions, from the Russell Group to its very own UCL Partners Centre, the world's largest academic health science centre. With around 90% of UCL graduates entering work or further study within six months of graduating, a degree from UCL is hugely beneficial to its students.

The course

UCL delivers a traditional course with a strong focus on research and a mandatory intercalated BSc. Dissection is also a feature. Medical and clinical science teaching occupies the first two years at the central London Medical School, followed by the intercalated B.Sc degree. The final three years provide the bulk of clinical training in the associated University College Hospital, as well as the Royal Free, Whittington and primary care practices.

WHY THIS IS

For UCL, your performance in the BMAT is proving to be the most important factor in the below average chances of success here. This is despite certain other factors in your profile acting in your favour.

IMPROVE YOUR CHANCES

Make sure you are well-prepared for the BMAT as any improvement in your score will increase your chances. You should also do some practice for your interview. You will need to increase your BMAT score by at least 4 points in total to significantly increase your chances.

Summary

Continuously highly-ranked in league tables, the Russell Group UCL is situated in central London. Its medical school teaches a traditional and research-focussed course utilising the associated University College Hospital, and with integral intercalation for all students.

The next steps

We hope you enjoy the next steps of preparing and making your application!

By now you should feel fully informed and ready to take the steps needed to improve your chances, as well as choosing carefully where to apply. Remember that by carefully spending your four application slots to balance out the medical schools you like the most with those where you've got the greatest chance, you can give yourself the highest possible chance of success.

If you have any questions, don't hesitate to ask.

Good luck with your preparations, best of luck with your application and we hope you enjoy your future career as a doctor!
